

Task 1

- Actors ~ Most people missed the online/computer system that would record all the information or missed the airline which you are told had specific duties.
- Use Cases ~ Use cases should be linked to an actor unless part of a generalisation.
- Generalisations ~ these require directional arrows showing the direction of functionality.
- Dependencies ~ The directional arrows tended to be the wrong way round. The relationship word is EXTEND not exclude.
- Notation ~ Use case names go under the bubbles. The dependency arrows are dashed.

Task 2

- Main Success Scenario ~ Most people have not created this. You should have an itemised list of the sequence.
- Sequence Diagram ~ These were very good.
- Notation ~ Many of you missed off time going down the side.

Task 3

- Definitions ~ Missed that the customer accepts the terms and conditions and payment.
- Links and Flow ~ Many labelled the end states but didn't clearly identify the successful end state.
- Notation ~ This was generally very good.
